Transportable Bladder tanks

Our goal is to provide the best quality product to our customers. To achieve this objective, FST products are manufactured under ISO 9001 and comply to the SANS 10329:2020 specifications. This ensures that the Transportable bladders and accessories are produced under the most stringent quality audit and meet the required structural and durability performance standards.

We believe it is our duty to ensure that our customers are provided with the most advanced products that incorporate safe and user-friendly systems. That is why we are committed to continuous research and development programmes that seek out new and innovative products. We will always strive to provide you, our customer, with technical expertise and value-added services.

Transportable Bladder tanks

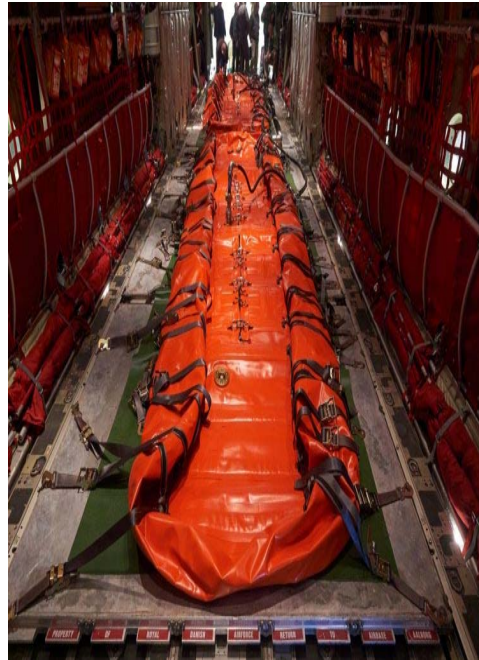

FTS products are very rugged and have a long lifespan. The tanks modular design, makes for easy "flat-packed" palletised consignments for economical transport, and enables rapid on-site assembly.

The complete liquids logistics solution

FTS tanks can supply bladder tanks to be used in almost all modes of transport

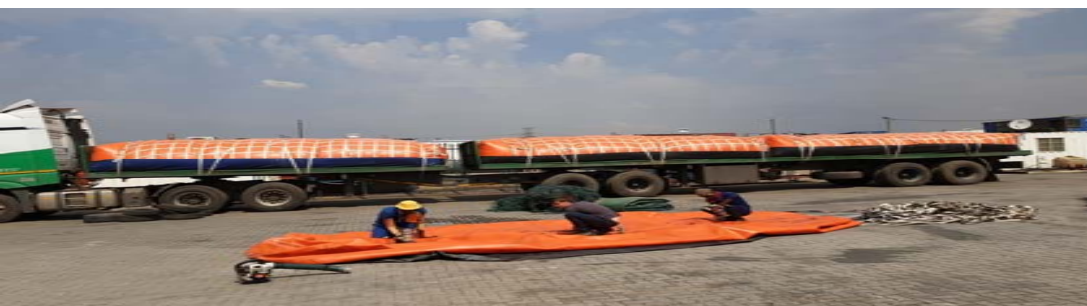

- Aviation bladder transport
- Train bladder transport
- Truck bladder transport
- Ship or boat bladder transport

Transportable Bladder tanks

Fuel diesel bladders can come equipped with all the necessary components for transportation, for example water transportation or fuel transportation on vehicles. Flexible tanks are equipped with adjustable skirts and adjustable towage straps designed to provide high resistance to transport constraints. Adjustable skirts may be replaced by a strap net in case the users need to transform a traditional storage tank to a transportable flexible tank. Specially developed Flexible fuel bladders can also be towed by sled, as in the unique Antarctic expeditions made by American, German and British science teams. High end fuel bladders are made of elastomer coated fabrics manufactured by homogeneous vulcanization in one operation. The fabrics ensure the mechanical resistance. Coating and design engineering grant chemical properties and water tightness.

Transportable Bladder tanks

The coating of the material is selected according to chemical characteristics of the liquid transported so as to avoid chemical reaction and guarantee the original properties of the liquid. They are long life, multiple use Bladder tanks and are made to last for 6 years and beyond. The Flexitanks are fully self-supporting and surge resistant when filled to capacity and tied down onto the trailer or truck bed.

Imagine modular transport for liquids one way and commodities the other..... in the same vessel. Our customers are loading ORE or MANGANESE in the Northern Cape of South Arica in a half-high container to Europe and the Far-east and bringing back Diesel, fertilizer or any other precious liquid on the way back.... In a FTS Bladder-tank in the same half-high container

Over the years we have been involved with many significant projects within numerous industries. We have established ourselves as a professional, reliable supplier of high-quality tanks for a variety of standard and specialised applications.

All our installation and operations are carried out in a safe manner as determined by OHS Act (85 of 1993) and any amendments to it. We take health and safety extremely seriously and all our installation teams are regularly trained and upskilled.

We align ourselves with customers' needs to make their experience quick turnaround time, superior products and after sales-support.
